ABSTRACT

The package according to the invention is mainly made from transparent or partially transparent or intransparent, especially multilayer films (seal layer/barrier layer). The package, i.e. the film, ~~comprises~~includes an opening area in which a tape is provided, preferably sealed, on the inside or the outside, preferably the outside of the film. The tape 4 together with the film are repeatedly foldable in order to open and close the package and whereas the tape 4, once folded, prevents the plastic film from being unfolded. The tape can be reversibly folded in multiple forms.
